

# Table of Contents

## Preface (9-22)

- Introduction
- What is RF
- Wavelength and Waves
- RF History

## Chapter 1 – Electromagnetic Theory (23 - 79)

- The Goal for Electromagnetic Theory in RF
- Vector Calculus Tools
- Maxwell's Equations
  - The Six Assumptions
  - Deriving the Wave Equation/Helmholtz Solution for the Electric Field
- Plane Wave Parameters
  - Phase Velocity
  - Wave Impedance
  - Phase Constant/Wave Number
  - Attenuation Constant
  - Propagation Constant
  - Skin Depth
  - Surface Resistivity
- Plane Waves in Different Media
  - Plane Waves in Lossless Media
  - Plane Waves in General Lossy Media
  - Plane Waves in Conductive Media
- Plane Waves Parameters Examples
  - Example 1) Lossless Media
  - Example 2) General Lossy Media (Rogers Duroid 5880)
  - Example 3) Good Conductive Media (Copper)
  - Example 4) Example Comparison and Takeaways
- End of Chapter Problems – Chapter 1

## Chapter 2 – Transmission Line Theory (80 - 151)

- Transmission Line Theory
- Circuit Models for Transmission Lines
- The Imaginary RF Probe
- The Lossy Transmission Line and the Telegrapher Equations
- Characteristic Impedance
- The Lossless Transmission Line
- The Terminated Lossless Transmission Line

- Load Impedance-Matching
- Reflection Coefficient
  - Special Case 1: Perfectly Matched Circuit
  - Special Case 2: Short Circuit
  - Special Case 3: Open Circuit
- Return Loss
  - Special Case 1: Perfectly Matched Circuit
  - Special Case 2: Short Circuit
  - Special Case 3: Open Circuit
- VSWR
- Input Impedance
  - Special Case 1: Line Length of Zero
  - Special Case 2: Matched Load
  - Special Case 3: Open Circuit Load
  - Special Case 4: Short Circuit Load
  - Special Case 5: Quarter Wavelength Line
  - Special Case 6: Half Wavelength Line
- Transmission Coefficient
- Insertion Loss
- End of Chapter Problems – Chapter 2

## **Chapter 3 – Superposition, Guided Waves, and Planar Geometries (152 - 175)**

- Superposition, Boundary Conditions, and Modes
- Guided Waves and Planar Geometries
  - Stripline
    - Stripline Parameters Example
  - Microstrip
    - Microstrip Parameters Example
  - Stripline vs. Microstrip
    - Stripline vs Microstrip Parameters Comparison
- End of Chapter Problems – Chapter 3

## **Chapter 4 – Impedance Matching Networks (176 - 234)**

- What is Impedance Matching
- The Smith Chart
- Important Smith Chart Areas and Important Plots
- Basic Smith Chart Plotting and Information
  - Smith Chart Plotting Examples
- L-Networks
  - Low Pass Configuration
  - High Pass Configuration
  - Low Pass Example
  - High Pass Example
- Stub Networks
- Quarter Wave Transformer

- The Complex Plane, Rectangular/Polar Form, and Geometrical Relations
- Open Stub Tuning
  - Open Stub Tuning Example
- Quarter Wave Transformer
  - Purely Real Impedance Example
  - Complex Impedance Example
- End of Chapter Problems – Chapter 4

## **Chapter 5 – Network Analysis, Scattering Parameters, and RF Measurements (235 - 308)**

- Network Analysis
- ASLOTI
- Kurokawa's Power Waves
- Return Loss, Insertion Loss, and the Confusion that Arises with S-Parameters
- S-Parameters and Port Expansion
  - 1-Port Network
  - 2-Port Network
  - 3-Port Network
  - 4-Port Network
- Reciprocal and Non Reciprocal Circuits
- Measuring RF Circuits via S-Parameters
- The Vector Network Analyzer
- State Files
  - Frequency Range
  - Number of Points
  - IFBW
  - Averaging
  - Formatting
  - Scaling
  - Reference Level
- Calibration and the De-Embedded Measurement Plane
- Smith Chart Format for S-Parameters
- One Port Measurements
  - LC Series Stub
  - Yagi Microstrip Antenna
- Two Port Measurements
  - 30MHz Lowpass Filter
  - 2.4GHz Bandpass Filter
  - 100MHz High Pass Filter
  - 5dB Attenuator
  - 10dB Attenuator
- Extracting and Analyzing Data in MATLAB
- Extracting Touchstone Scattering Parameter Data
- End of Chapter Problems – Chapter 5

## **Chapter 6 – From Theory to Practice (309 - 329)**

- One Big Design Problem
  - Step 0: Problem Setup
  - Step 1: Calculate Microstrip Width
  - Step 2: Normalize the Antenna Impedance
  - Step 3: Plot on the Smith Chart
  - Step 4: Transmission Line Rotation
  - Step 5: Determine Stub Admittance
  - Step 6: Calculate Open Circuit Stub Length
  - Step 7: RF Simulation
  - Step 8: Network Analysis and Port Expansion
  - Step 9: State File Setup
  - Step 10: Network Analyzer Calibration and Verification
  - Step 11: Analyzing and Plotting Measurement Data
  - Step 12: Take a Moment to Reflect

## **Chapter 7 – The Future of RF (330 - 334)**

- The Future of RF
- RF and Quantum Systems
- Adaptive Antenna Systems
- Measurement Limits
- The Road to 6G
- RF Photonics
- Metamaterials and Engineered Electromagnetic Media
- Conclusion

## **Epilogue (335 - 336)**

## **Bibliography (337 - 339)**

## **About the Author (340)**
